

PI100

BIG Prosess Display USER GUIDE's

DEVICE DESCRIPTION

The PI100 model devices are devices that enable the remote monitoring of various sensor signals used in industrial environments. They have one universal analog input, one analog output module and one RS 485 MODBUS RTU communication module.

These devices are microcontroller based and are easily configured on the computer with the SBA200 USB / RS485 Converter.

All inputs and outputs are isolated from the network and from each other.

SAFETY PRECAUTIONS

Before using the device, please read the warnings below and this guide carefully.

The accidents and damages resulting from not following the warnings included in this guide are under user's responsibility.

Take the necessary precautions in order to prevent accidents and damages that may result in case the device gets faulty.

Do not use this device in environments where flammable or explosive gases exist.

Do not allow metal fragments or lead wire scraps or liquid matters to fall inside this device.

Do not touch the terminals while the device is energized (power on)

Device will be out of guarantee when it gets faulty resulted from misusages.

Do not power up the device before the connections related with the device are performed in accordance with connection diagram.
